- Mobile reporting on any device
- Templated for Traverse
- Powerful, yet easy-to-use
- Unlimited users

Additional Business Tools for Advanced Analytics

Forecasting / Predictive Analytics

With seamless integration to Traverse data, easily anticipate your needs and manage your risk with insight into where your business is headed. Compare possible outcomes of events with the ability to perform what-if analysis and foresee challenges or potential disruptions before they occur.

Advanced Budgeting & Planning

Relieve the time-consuming and manual process of budgeting and forecasting with a simplified approach. Leverage what-if planning tools to easily create multiple budget scenarios for comparison and evaluate prior year, actual, and current year budgets side-by-side. Plan future revenue scenarios by blending statistical forecasts with managerial insight, and track expenses across projects, budgets, or programs.

Big Data

Consolidate, visualize, and analyze data from various sources, including suppliers and vendors, into a single data warehouse. Users can leverage interactive drag-and-drop functionality and point-and-click drill down capabilities with intuitive displays that highlight trends, patterns, and relationships. Data manipulation tools and automatic data cleansing help users create the best possible data set.
