# System Manager

Traverse is the next generation of business management software. Developed entirely with Microsoft technology, it uses .NET and SQL Server, and gives you four layers of adaptability that allow you to personalize, design, integrate, and customize the software.

Traverse gives you the tools you are already familiar with and provides a seamless interface to Microsoft products such as Word, Excel, and Outlook, as well as web development tools. System Manager provides features such as multilingual and multicurrency capabilities, and users can choose keyboard navigation, point-and-click navigation, or both. Using combinations of hot keys, you can bring up utilities, delete transactions, and undo your last action.

Traverse manages your financial information quickly, easily, and effectively. You can do quick sorts on any field in ascending or descending order with just one mouse click. In addition, Traverse provides password protection by application, menu, function, and database object. You'll also find table-driven international and industry-specific language sets, and individual workstation options including keyboard controls, toolbars, and language sets.

In addition to Productivity Reports, Traverse also has built-in pivot tables and charts for a number of functions that help you organize and analyze your business data.

- **Set up as many companies as you need for processing and reporting.**

- **Close each period within each application to prevent further processing in that period (up to 367 periods allowed per year).**

- **Set up an unlimited number of user-defined custom fields with Traverse Design Studio.**

- **Set up inventory item IDs with description, cost, price, and General Ledger accounts, even if you don't have the Inventory application.**

- **Set up employee IDs—even without the Payroll application—and use them whenever Traverse needs them.**

- **Reprint, export, or purge archived documents using the Manage Documents function.**

- **Set up the Transaction Payment System to manage interactions with external payment providers by using the Payment Service Integration function.**

Traverse

Additional Features

- Set up and track currencies with easy updating of currency exchange rates.

- Flyout menus allow you to quickly select the function to use.

- Train employees using the built-in sample data company.

- View company and user ID, displayed on every screen.

- Change the fiscal year and/or payroll year from any screen.

- Track individual user activities within Traverse.

- Easily adapt functions to fit your business needs.

- Get the help you need using the comprehensive online help system.

- Print to file in PDF, rich text, and other formats or export to Excel, HTML, or XML format.

- Optionally preview reports before you print them.

- Control form and series numbers (such as the next Accounts Receivable invoice number and Accounts Payable check number) with one function.

- Make sensitive information unreadable by any application outside of Traverse with data encryption.

- Import mapped data from a program other than Traverse.

- Set user-specific defaults for system-defined defaults such as Bank ID, Location ID, Batch ID, and more.

- Set up My Work menus to simplify the workflow for your users. You can set up separate menus for daily, weekly, and monthly tasks.

Traverse Global Requirements: *UPDATE!!!

Hardware and software requirements are constantly changing. Open Systems recommends using the most up-to-date processor available. Please remember that RAM requirements increase with the number of users. You can find the latest hardware and software guidelines on the Open Systems website:
