

Traverse Turnkey Servers

If you're looking for a new server for your business, and plan to install Traverse, then Traverse Turnkey Servers represent the best value and convenience for your technology budget. Our single-source solution features cutting-edge Hewlett Packard technology, certified as ideal for your Traverse software environment.

What's in the box?

High quality HP ProLiant servers, with everything you need pre-installed and configured for your Traverse installation. You receive a custom solution from Open Systems Inc, on hardware that is certified and configured for optimal performance for a Traverse installation of your size. The end result: a high performance server solution with no risks of server compatibility issues or improper configuration.

Start your installation on the right foot with expert configuration

Our Server Engineers will install Microsoft SQL Server and the Traverse Server software (Traverse Server Manager, Traverse License Server, and the test Traverse client), all configured exactly to the specifications selected with your purchase agreement.

Speedy delivery

Once configured and tested, we will ship the server to you. Connect the server to your network, and we will assist you in joining the server to your Windows Domain and installing the Traverse client on your PCs (optional onsite IT install services are also available).

That's it, you are now up and running and can begin the next steps of your implementation, preparing for your go-live.

For more information or a quote, please contact your software sales representative. Your sales rep can also schedule a call with one of our Traverse Install/IT Team Members to review technical details and processes. If your needs are unique or more advanced, then we can also provide custom configuration quotes designed specifically for you.
